Lead Data Engineer at Datawalt (Santiago, Chile), where I architect and run Warp, an ETLT platform consolidating 60+ enterprise systems (SAP Business One, SAP HANA, Softland, Odoo) into BigQuery and ClickHouse. Classically trained composer turned engineer; I lead a team building production data infrastructure for clients across Chile.

EXPERIENCE

Data Engineering Lead · [Datawalt](#) Oct 2024 — Present

- Architect and own Warp, an in-house ETLT platform replacing Fivetran for 60+ enterprise sources (SAP B1, HANA, Softland, Odoo) feeding BigQuery and ClickHouse.
- Lead a small data engineering team; promoted into role by reframing scope from individual delivery to platform scalability.
- Designed the ECL (Extract, Conform, Load) framework powering production pipelines: incremental cursor extraction, staging swap, health tables, tiered freshness.
- Built parametrized Power BI / DAX reporting templates and unified HR star-schema (Talana, GeoVictoria, Buk) for multi-client deployment.
- Stack: Python · Go · SQL · Dagster · dlt · dbt · BigQuery · ClickHouse · DuckDB · GCP · Docker · GitHub Actions.

Data Engineer · [Datawalt](#) 2023 — Oct 2024

- Delivered enterprise ELT pipelines and Power BI semantic models for finance, sales, and operations clients (Bag, Enaex, Janssen, Canontex, others).
- Owned SAP B1 / HANA extraction patterns, star-schema modeling, and DAX/Deneb (Vega) visualizations.
